

-2-

In those areas where there Sumps, Chambers, etc.  
the depth of 2/5 feet is ridiculous

Where there has been clarifiers or pits were they have  
been filled - may have to start bore  
to get to the bottom of the pits and get  
through the concrete

- use power augers - 10/15

---

### Pipelines:

Pud oil lines can be sampled when removed

- Pud oil lines - excavate first and then  
investigate
